Inglés

Good morning!

Hoy trabajaremos con un texto de la página 60 de nuestro libro de texto acerca de la formación de nuestro querido planeta tierra. Tras leer el texto realizaréis la actividad 1 en la cual uniréis el vocabulario con su definición en inglés.

1  **Read and match the words with the definitions.**

Two hundred and twenty-five million years ago, all the land on the Earth formed one supercontinent called Pangaea (pan-jee-ya). This continent separated because the Earth's surface was always moving. Plate tectonics is the theory of this movement.

Now we have seven continents. They are Africa, Antarctica, Asia, Australia, Europe, North America and South America. The surface of the Earth is still moving. The movement of the tectonic plates causes earthquakes. It also forms new mountains and volcanoes.

1 volcanoes	a an extra large area of land
2 continents	b mountains which erupt gas and ash
3 earthquakes	c large areas of land separated by water
4 plate tectonics	d theory of the movement of the Earth's surface
5 supercontinent	e violent and destructive shaking of the Earth's surface
